Indesco recognized long ago that individual businesses have specialized needs, that's why we are committed to offering manufacturers a diverse range of Custom Designed Automated Machinery and Equipment.

- **Mechanical Systems**
Indesco designs and builds Mechanical or Specialized Machinery Systems from your existing specifications or from our own design.
- **Robotics and Pick and Place Modules**
Robotic transfer arms are integrated for more complex, intricate operations. Indesco has vast experience in robotic equipment, for welding adhesives, or riveting operations.
- **Indexing Systems**
Rotary and linear index systems are configured and integrated to move your work-pieces smoothly and reliably from station to station.
- **Synchronous Systems, Rotary and Linear**
We design and build a configuration that keeps your work-pieces moving, from station to station.

Above: Custom-designed, automated pick and place workcell.
Below Center: Multi station high pressure automated valve test and certification machine.
